

CargoLink

Freight & warehouse marketplace on a live backend

Production	Portfolio	Masters	Proud
------------	-----------	---------	-------

Repo / Path	cargolink-app
Domain	Logistics marketplace (Uzbekistan / CIS)
Stack	Next.js 16 (App Router), React 19, TypeScript (strict), Tailwind v4, Zustand 5, shadcn/radix, motion, Vitest, Playwright
Status	Working MVP, mid-integration - ~75% complete
Live / Deploy	Wired to live 'Karvon' backend (https://fan.sarbon.me)

Overview

A freight & warehouse marketplace with three listing domains (cargo shipments, transport vehicles, warehouse spaces), phone/OTP authentication, and a token economy (1 token = 1 contact reveal, subscriptions, 30-day free re-reveals), plus company verification and a multi-tab profile dashboard. Trilingual (en/ru/uz).

Key Features & Technical Highlights

- Single typed HTTP layer (`src/lib/api.ts`) against a real backend - not a mock.
- Real auth: single-flight token refresh, 401 retry, HTTPS enforcement, JWT expiry peeking, OTP lockout.
- Token economy for contact reveals with subscription tiers.
- Server-side filtering, sorting and pagination on cargo & warehouse listings.
- Separate admin/moderator API realm; hardened CSP and full security-header set.

Engineering Evidence & Metrics

- 61 TS/TSX source files; 16 routes; ~52 conventional-commit messages.
- ~51 Vitest unit tests across `api` / `security` / `stores`.
- QA discipline: two dated QA reports with live backend contract probing, a Playwright auth harness, screenshots, console/network logs and a test ledger.
- `vercel.json` + `next.config.ts` with hardened CSP.

Why It Matters (application / interview talking points)

- Demonstrates real integration engineering (auth, refresh, security headers) and genuine QA discipline.
- Honest, self-tracked gap list shows engineering maturity.

Honest Caveats

- Mid-integration: post forms not yet POSTing; favorites/routes/notifications defined but unwired; transport has no backend yet; no CI; CLAUDE.md is stale.
