

COMPILE (Codign-ThreeJs)

'Source becomes system' - force-directed 3D dependency graph

Portfolio	Proud	Production
-----------	-------	------------

Repo / Path	asadbek/3Js/Codign-ThreeJs
Domain	Creative WebGL / scrollytelling
Stack	Three.js, TypeScript, Vite, GSAP, Lenis, custom Fruchterman-Reingold solver, UnrealBloom
Status	Production - ~90% complete
Live / Deploy	Not publicly deployed

Overview

A scroll-driven experience where typed source assembles into a force-directed 3D dependency graph, ignites into a running system, then morphs into an architecture 'city'.

Key Features & Technical Highlights

- Custom Fruchterman-Reingold force-directed graph solver.
- Instanced graph rendered in ~3 draw calls; UnrealBloom; one custom shader.
- Fully procedural; 21-file QA harness.

Engineering Evidence & Metrics

- 9 files, ~1,330 LOC; original layout-solver implementation.

Why It Matters (application / interview talking points)

- Shows algorithmic creativity (graph layout) fused with polished WebGL presentation.
