

Endless Drive (game-threeJs)

Chill endless procedural driving game

Portfolio

Proud

For-fun

Repo / Path	asadbek/3Js/game-threeJs
Domain	3D game
Stack	Three.js, TypeScript, Vite, GSAP, procedural Web Audio, 2 shaders, Draco GLB
Status	Working / production - ~85% complete
Live / Deploy	Not publicly deployed

Overview

A chill endless procedural road-trip game: a low-poly car cruises an infinite highway that cross-fades between biomes, with weather, day/night and a 100% procedural Web Audio engine.

Key Features & Technical Highlights

- Procedural endless world with biome cross-fades and weather.
- Fully procedural Web Audio engine sound; a small custom physics layer.
- Director state system; object pooling + adaptive performance; seeded determinism.

Engineering Evidence & Metrics

- 21 files, ~3,193 LOC (the most game logic of the set); 38-file QA harness.

Why It Matters (application / interview talking points)

- Substantial game-systems engineering (procedural world, audio synthesis, perf management).
