Domain Web game

Stack Next.js 16 (Turbopack), React 19, Tailwind v4, shadcn/base-ui, Motion, Zustand

Status Working MVP - ~80% complete

Live / Deploy Not publicly deployed

Overview

The web version of the Imposter game: 3-12 players on one device, full flow from setup to deal, clues, discussion, vote, eliminate, final guess and results.

Key Features & Technical Highlights

- Pure game engine (engine.ts) with state-machine stores.
- 15+ trilingual themes (~414 theme entries) plus a theme editor and chaos mode.
- Web Audio + haptics; vercel.json with security headers.

Engineering Evidence & Metrics

- Clean engine/UI separation; large localised content set.

Why It Matters (application / interview talking points)

- Pairs with the Android version to show one product across web + native.

Honest Caveats

- Fully client-side by design; no tests.
