WebGL sphere-gallery portfolio with a custom lens shader

★ MASTERS STANDOUT	Portfolio	Proud	Masters	Production
-----------------------	-----------	-------	---------	------------

Repo / Path	asadbek/threeJs
Domain	Creative WebGL / portfolio
Stack	Three.js, GLSL, GSAP, TypeScript, Vite (standalone, no React)
Status	Polished - ~80% complete; deployed
Live / Deploy	asadbe.uz

Overview

A Phantom.land-style WebGL portfolio: the camera sits inside a sphere walled with ~38 project cards; inertial drag lets you wander and tap to open a case study.

Key Features & Technical Highlights

- Custom GLSL lens-distortion post-processing pass (barrel / vignette / blur / grain).
- Inertial sphere controls with idle auto-drift; EffectComposer pipeline.
- Client-side routing; immutable-asset caching via a sophisticated vercel.json.

Engineering Evidence & Metrics

- From-scratch shader + camera physics; live at asadbe.uz.

Why It Matters (application / interview talking points)

- Strong technical WebGL signal - hand-written shaders and camera physics read very well for a masters application.
