

NOVA Store

Full-stack e-commerce storefront with a real backend

Production	Portfolio	Proud	Masters
------------	-----------	-------	---------

Repo / Path	asadbek/e-commerce/novastore
Domain	E-commerce
Stack	Next.js 16, React 19, TypeScript, Tailwind v4, shadcn, TanStack Query, Zustand, react-hook-form + Zod, Framer Motion, Lenis, PocketBase
Status	Near-production - ~80% complete
Live / Deploy	store.xodjaye.uz

Overview

A complete e-commerce storefront: catalog, product pages, cart, wishlist, checkout, orders, profile and authentication. Architected feature-sliced, with a real PocketBase backend plus a clever production fallback.

Key Features & Technical Highlights

- Real PocketBase backend: bundled server, 6 collections via pb_migrations/, and seed scripts.
- Graceful dummyjson.com fallback so the store still renders when statically deployed.
- 13+ routes; Feature-Sliced Design slices; Google OAuth.
- TanStack Query for server state, Zustand for cart/wishlist, RHF + Zod forms.

Engineering Evidence & Metrics

- Real database with migrations and seeding (not mock data).
- Live deployment at store.xodjaye.uz.
- Production fallback strategy shows thoughtful deploy engineering.

Why It Matters (application / interview talking points)

- The most complete full-stack web project: real backend + migrations + seeding + OAuth.
- Good example of designing for graceful degradation in production.

Honest Caveats

- No automated tests.
