

Real-Estate Predictor

Property-price regression with a clean sklearn pipeline

Portfolio

For-fun

Repo / Path	asadbek/AI ML/real-estate-predictor
Domain	Tabular ML
Stack	scikit-learn GradientBoostingRegressor in a ColumnTransformer pipeline, FastAPI; React + Vite + Tailwind
Status	Working - ~85% complete
Live / Deploy	Not publicly deployed

Overview

Predicts a property's price from input features via a web form, backed by a properly structured scikit-learn pipeline.

Key Features & Technical Highlights

- ColumnTransformer pipeline (imputer / scaler / one-hot) serialized with joblib.
- Train/test split with R2 / RMSE / MAE reporting.

Engineering Evidence & Metrics

- Clean, idiomatic sklearn pipeline engineering.

Why It Matters (application / interview talking points)

- Good demonstration of ML engineering hygiene (pipelines, serialization, metrics).

Honest Caveats

- Trained only on synthetically generated mock data, so predictions are circular / tutorial-grade.
