

Sarbon Atlas

Interactive 3D freight-route globe (R3F)

Portfolio

Proud

Production

Repo / Path asadbek/3Js/sarbonThreeJs

Domain Creative WebGL / data viz

Stack React + react-three-fiber + drei + @react-three/postprocessing + Zustand; 2 custom shaders

Status Working / production - ~80% complete

Live / Deploy Not publicly deployed

Overview

An interactive 3D freight-route globe for the Central Asia logistics corridor: an auto-rotating mission-control globe with glowing cargo arcs from Tashkent to 10 cities; click a city to focus and watch a truck animate the route.

Key Features & Technical Highlights

- The only R3F app in the set - clean react-three-fiber component split.
- Custom shaders: additive tube-flow arcs + a fresnel atmosphere.
- Instanced markers; bloom; reduced-motion path; includes a Next.js porting guide.

Engineering Evidence & Metrics

- 20 files, ~881 LOC; production-minded (a11y + porting guide).

Why It Matters (application / interview talking points)

- Shows R3F (React) WebGL skills and ties visually to the Sarbon product domain.
