

Spotify Stats

Personal Spotify analytics dashboard with real OAuth

Portfolio

Production

For-fun

Repo / Path	asadbek/spotify-app/spotify-stats
Domain	Music analytics / data viz
Stack	Next.js 16, React 19, TypeScript, Tailwind v4, TanStack Query, Zustand, spotify-web-api-node, Recharts, three/r3f, next-intl (en/ru/uz)
Status	Working MVP - ~75% complete; deployed
Live / Deploy	Vercel (live URL configured)

Overview

A personal Spotify analytics dashboard: OAuth login, top tracks/artists, recently played, a genre chart, an 'obsession score' and shareable cards.

Key Features & Technical Highlights

- Server-side OAuth code->token exchange with cookie sessions.
- 5 live Spotify Web API proxy routes returning real user data.
- Recharts visualisations + share-card generation; trilingual UI.
- Vercel deploy config with a live URL.

Engineering Evidence & Metrics

- Real third-party OAuth + live API integration (not mock).
- Deployed on Vercel.

Why It Matters (application / interview talking points)

- Best 'real backend' example among the smaller web apps - proper OAuth and a live API integration.

Honest Caveats

- The 'AI roast' feature is hardcoded, not real AI; tests/ dirs are empty; sample secrets in .env.local.example.
